

Transition Effects PPT

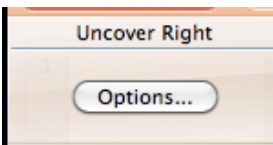

What is a Slide Transition?

A transition effect governs how the slides appear on the screen. So when you see a slide appear from the bottom right hand side or slowly float down from above, you will know that a transition effect has been applied.

1. Create the presentation as normal.
2. When finished decide which Transition effect to apply.
3. Click the Transition Gallery.

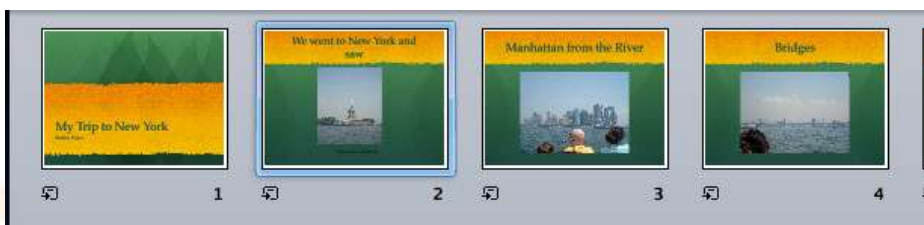

4. Select the transition you wish to apply.
5. If you want to apply this effect to all the slides click the Options button.

6. Set the Options you require.

7. You will see a small symbol next to the slides with a transition effect when you view them in Slide Sorter View.

When you play your slideshow your transition effect will be played.
