

## Overview

At The IT Training Surgery we know that making time for learning new skills to improve your performance can be a challenge. Courses run at your premises and on your own computers.

## Who should attend?

This course is for people wishing to take the next step on from the basics of Photoshop who are particularly interested in working with photographic images. You will be encouraged to be creative: once you have mastered the techniques, this product is only limited by your creative potential!

You can bring your own digital photographs in to work on in the Workshop.

## Requirements

Participants require a basic understanding of Layers, the History Palette and the main tools in Photoshop.

## What will I learn?

In particular you will be able to:

- Modify and save selections
- Use quick masks to modify selections
- Combine two or more images to remove unwanted objects
- Produce stunning effects by using layers and blending modes
- Apply adjustments using an Adjustment Layer
- Correct lens distortions and colour casts
- Distort images using the liquify tool
- Sharpen your image to give a professional looking image

- Ensure your image is at its optimum by controlling levels, curves and colour layers
